

Leftover Food Redistribution System

Module: Food Management System (CRUD Operations)

Abstract

The Leftover Food Redistribution System is designed to minimize food waste by connecting food donors with people in need. This system allows efficient management, tracking, and redistribution of surplus food.

Introduction

Food waste is a major global issue. This project provides a digital solution where restaurants or individuals can donate leftover food, and NGOs or needy people can request it.

Objectives

- Reduce food waste
- Help needy people
- Efficient food tracking
- Easy management system

Your Module: Food Management

This module handles all operations related to food items including adding, editing, deleting, and displaying food data.

Implemented Files

- add_food.php – Adds new food records
- edit_food.php – Updates food details
- delete_food.php – Deletes food entries
- food_list.php – Displays food list
- Requests_Table.sql – Database table
- Request_related_queries.sql – Queries

ER Diagram (Description)

Entities: - User (UserID, Name, Role) - Food (FoodID, Name, Quantity, Expiry) - Request (RequestID, UserID, FoodID) Relationships: - User requests Food - Admin manages Food

System Workflow

1. Donor adds food 2. Food stored in database 3. Users view food list 4. Users request food 5. Admin manages requests

Technologies Used

Frontend: HTML, CSS Backend: PHP Database: MySQL

Conclusion

This system provides a simple and efficient way to reduce food waste and support the community.
